Portfolio: <https://augustoamado.vercel.app/#portfolio>

SKILLS

- **Advanced AI & Productivity:** multi-LLM orchestration (Claude/GPT/Gemini), custom agents, skills and MCP integrations, developer workflow automation, prompt engineering, RAG (hybrid vector + full-text search), AI output evaluation and validation
- **Backend:** Node.js, Express, Go, Python (FastAPI), strict TypeScript, REST APIs, Zod, authentication (OAuth/JWT), RBAC, webhooks
- **Frontend & UX:** React, Next.js, Tailwind CSS, shadcn/Radix UI, desktop/mobile responsiveness and flow validation
- **Data:** Supabase, PostgreSQL, pgvector, SQL
- **Payments & Integrations:** Stripe (metered billing), GitHub API, HMAC-validated webhooks, Google Sheets API, WhatsApp/Telegram, n8n, real-time flows (SSE + pub/sub)
- **DevOps & Environment:** Linux/WSL, Docker, Azure (Container Registry + Web Apps), CI/CD with GitHub Actions, Git
- **Testing & Quality:** Jest, supertest, technical review, regression prevention and CI/CD
- **Game dev:** C# · Unity

EDUCATION

Anhanguera Educacional: **Systems Analysis and Development** - In progress - **Expected graduation** in Dec/2026.

PROFESSIONAL EXPERIENCE

STARTUP 10XDEV, Belo Horizonte - Co-founder and Full Stack Developer

Jun/2025 - Present

Responsibilities:

- Build and maintain a **SaaS in production for over 1 year (Next.js, Node.js, TypeScript, Supabase/PostgreSQL** with 48 tables), with 1,000+ commits across APIs, dashboards, integrations and infrastructure;
- Built **multi-LLM orchestration** unifying **6 models from 3 providers** (Claude, GPT, Gemini) behind a single interface, normalizing 3 distinct API formats, with **SSE streaming**, cancellation and **automatic fallback** between models;
- Implemented **usage-based billing with Stripe**, charging **per token**

(pricing table with 12 rates: 6 models × input/output), parameterized currency conversion and markup, **idempotent webhooks** and request-id error logging for production diagnostics;

- Reduced Stripe integration setup from **1 week to ~20 minutes** by documenting the process as an executable guide reused across 3 projects;
- Developed **GitHub synchronization** (OAuth, **HMAC**-validated webhooks) with **incremental snapshots** per push and file deduplication, avoiding full repository re-imports;
- Create **agents, skills** and **MCP** integrations to automate development workflows and standardize technical context, always with human review;
- Write and maintain **automated tests (Jest, supertest)** protecting billing, authentication and critical integrations against regressions;
- Maintain **automated deployment** with multi-stage **Docker, GitHub Actions** and **Azure** (Container Registry + Web Apps), with healthchecks and non-root images;
- Translate business requirements into architecture, prioritize the **roadmap** and define **development standards** and technical guides reused by the team.

CONTI CONSULTORIA, Belo Horizonte - Development Assistant

Sep/2024 - Oct/2024

- Worked on **technical support, automation** and improvement of **internal IT processes**;
- Administered and supported **Office 365** and **Microsoft Azure** environments;
- Created **automations** with **Microsoft Copilot** and **dashboards/reports** in **Power BI**;
- Maintained workstations, installed **software/drivers** and provided **remote support**;
- Supported **technical documentation** and internal process organization.

NATIVE TECNOLOGIA, Belo Horizonte - IT Intern

Sep/2023 - Sep/2024

Responsibilities:

- Provided remote and on-site **technical support** to users, including **ticket management** and **remote access**;
- Configured and maintained workstations, software, antivirus tools, **networks** and **VPN**;
- Supported **Office 365, LogMeIn, AnyDesk, TeamViewer** and the **Azure** portal;
- Gained initial experience with **SQL** databases in **support and diagnostic routines**;
- Maintained, cleaned and assembled computers.

RTI SOLUÇÕES INTELIGENTES, Belo Horizonte - Technical Support Specialist

Jan/2023 - Sep/2023

Responsibilities:

- Provided **technical support** to customers through **remote service** and **operational issue resolution**;
- Installed and configured software, **drivers, peripherals** and **output devices**;
- Configured **network data sharing** and supported **infrastructure routines**.

OPEN_SOURCE_PROJECTS

- **RAG Service** (Python, **FastAPI**, **pgvector**): permission-aware RAG with **hybrid search** (vector + full-text fused by RRF in a single SQL query) and metric-based evaluation — **hit@3 = 1.0** and **MRR = 1.0** on the test corpus; local embeddings via Ollama, Docker and pytest;
- **AI Gateway** (Go, React): multi-LLM gateway with **parallel consensus** across providers (goroutines), **SSE streaming** and a UI comparing models side by side, live; race-detector tests and CI;
- **Full Stack Template** (Next.js 16, Express 5, Supabase): open-source starter with **39 reusable components**, authentication and tests.
